VENTABLE PRESSURE RELIEF VALVES

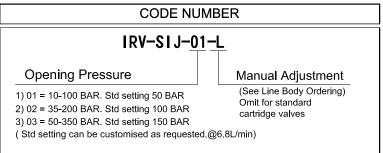

IRV-SIJ

RATING DIAGRAM

■ APPLICATION

These ventable pressure relief valves are good for continuous duty in the system and accurate pressure control with constant or varying flows, and also can be used on limiting pressure in a system. The vent feature can be used with remote pilot section for a two-pressure system or to allow manual or remote 'unloading' of the pump.

■ OPERATION

When port 1 pressure exceeds the setting of the valve, the pilot section opens, the pilot flow causes a pressure drop opens the main section spool, allowing flow to port 2. When port 3 vented, pilot flow is referenced directly to port 2, bypassing the pilot section. This flow through the vent causes a pressure imbalance, opening the main section and dumping the pump at minimum pressure drop.

■ PERFORMANCE

Rated Flow: 120 I/min Max. pressure: 350 bar

Leakage: 15 ml/min Working temperature:

Min. -20°C, Max. 90°C, with standard BUNAN gaskets

Min. -20°C, Max. 120°C, with optional VITON gaskets on request

■ RECOMMENDATIONS

Fluid: best use mineral oil with viscosity ranging between 10 and 200 cSt

Filter: 25 micron or better Cavities: see cavity data ST2A

Installation: before screwing the cartridge on the valve body, ascertain to provide suitable gasket lubrication with clean oil and also be sure to screw the cartridge manually in to reach against the gaskets in the valve body.
